

# Sunlytics: Global Solar Energy Insights

# 1 Stakeholder Analysis

Stakeholder analysis is essential for understanding all parties involved in the Sunlytics project and their level of influence, interest, and expected contribution. This ensures effective communication, smooth collaboration, and successful project delivery.

## 1.1 Stakeholder Identification

| Stakeholder                                    | Role / Responsibility                                         | Type     |
|------------------------------------------------|---------------------------------------------------------------|----------|
| Project Team                                   | Data collection, analysis, visualization, report writing      | Internal |
| University Supervisor                          | Provides academic guidance and project evaluation             | Internal |
| Data Providers (OWID, World Bank)              | Source of global energy, economic, and climate datasets       | External |
| Technical Contributors (Python/SQL Developers) | Assist in data cleaning, modelling, and warehouse development | Internal |
| Reviewers / Panel                              | Evaluate final project quality and accuracy                   | External |
| End Users (Researchers, Students)              | Use the final analysis, insights, and forecasts               | External |

Table 1: Stakeholder Identification

## 1.2 Power–Interest Matrix

| High Power, High Interest                  | High Power, Low Interest         |
|--------------------------------------------|----------------------------------|
| University Supervisor<br>Project Team Lead | Reviewers / Evaluation Panel     |
| Low Power, High Interest                   | Low Power, Low Interest          |
| Students, Researchers (End Users)          | General public observing results |

Table 2: Stakeholder Power–Interest Matrix

## 1.3 Stakeholder Influence and Engagement Strategy

## 1.4 Summary

The stakeholder analysis highlights the importance of:

| Stakeholder               | Influence | Interest | Engagement Strategy                                 |
|---------------------------|-----------|----------|-----------------------------------------------------|
| University Supervisor     | High      | High     | Regular meetings, feedback sessions, draft reviews  |
| Project Team              | High      | High     | Continuous collaboration in all project phases      |
| Reviewers / Panel         | High      | Medium   | Provide clear documentation and concise results     |
| Data Providers (OWID, WB) | Low       | Medium   | Maintain accurate referencing and data validation   |
| Students / Researchers    | Low       | High     | Provide accessible visualizations and summaries     |
| General Public            | Low       | Low      | Final presentation summaries and simplified outputs |

Table 3: Stakeholder Influence, Interest, and Engagement Strategy

- maintaining continuous communication with the supervisor and project team,
- ensuring accuracy and transparency when using external datasets,
- designing visualizations that are useful for students and researchers,
- preparing clear and well-structured documentation for reviewers.

This structured engagement ensures the project meets technical, academic, and analytical expectations.
